TRADESURA — BUILD REVIEW v1

17 September 2026 • Full walkthrough, 26 screens: sign-up → verify → getting started → home → customers → offer campaign • referrals • reminders • payouts • account • app icon

Overall: the core journey works and the copy is genuinely strong. Five blockers below need fixing before anyone outside sees the app; polish items after that. One flow is missing from this review and is needed urgently (see “Not yet reviewed”).

BLOCKERS — fix before anything goes external

B1 • False “Gas Safe verified” banner (Home). Home shows “Gas Safe verified — account active” with a green tick, but the account is NOT verified (sign-up returned no-match; Account screen correctly says “Not yet Gas Safe verified”). Wire the Home banner to the real verification status. A false trust badge is the one thing this product can never show.

B2 • Old codename + dev domain in customer-facing links (Refer an engineer). The referral QR and invite link read planlock-six.vercel.app/r/info. Every generated link (referrals, plan offers, customer pages) must use tradesura.com before anyone external sees the app.

B3 • “Couldn't start payment setup.” (Getting started, Step 1). Red error on first attempt; worked on retry. Reproduce and fix, or catch it gracefully with a retry prompt rather than a bare failure.

B4 • The money disagrees with itself (How it works vs Payouts). How it works: £12/mo plan = £115.20/yr, i.e. a clean 80%. Payouts: deducts Processing (~32p per collection) on top of the 20% — that's £3.84/yr different on the same plan. Engineers will do this arithmetic. Pick one model (absorb processing in the 20%, or state it everywhere) and make every screen agree.

B5 • SMS campaign can send with an empty trading name (Offer campaign). The fixed template merges {your trading name}, but nothing in setup forces a trading name to exist — this account has none. Guard the send: block until trading name is set (or fall back to first + last name). Otherwise the first real text reads “Hi Dave — it's .”

B6 • The plan builder cannot be started at all (Getting started / Offer a plan). Tapping “Set up my plan” in the Getting Started wizard does not open the plan builder, and the “Build my plan” link from the Offer-a-plan screen gives no working route either. The core action of the product — building a plan — cannot be performed anywhere in this build. FIRST FIX of the week: these screens are needed by Monday evening for the legal/T&Cs call as well as review. (The wizard already references the drafted Boiler Care £12/mo plan, so the builder logic may exist behind a broken route — please confirm.)

B7 • Payments built on the developer's personal Stripe sandbox, not TradeSura's account. Stripe Connect runs under “Oliver Wilcox sandbox” — an account TradeSura doesn't own. Nothing configured there (Connect settings, webhooks, products) transfers, and the two live-approval clocks — Stripe Connect platform review and Bacs Direct Debit enablement — can only start under TradeSura's own account, and both carry lead times that threaten October. This week: Matt creates the TradeSura Ltd Stripe account and issues restricted TEST keys; Oliver re-points the integration at TradeSura's test environment and submits the Connect + Bacs applications. Go-live then becomes a genuine key-swap instead of a re-integration.

NOT YET REVIEWED — needed urgently

Not yet reviewable until B6 is fixed: the plan builder flow itself, the plan output, and the customer-side signup page. Also untested this pass: Membership Shop (locked pending badge — fine), Show a customer, Messages & tickets. These get covered in the weekend re-run once B6 lands.

DRIFT — agreed design not implemented

D1 • Home screen design. The Home screen is running a functional default layout — the design agreed in the Build Guide has not been applied. Home is the screen every engineer sees every day and the first thing shown in any demo; bring it in line with the signed-off design as part of this week's pass.

D2 • Registration form sizing. The agreed improvement to the create-account form's sizing has not been applied — the form is unchanged from the previous build. Apply the agreed sizing as part of this week's design pass alongside D1.

POLISH — after the blockers

P1. Home greeting is a bare “Hello” — use the first name captured at sign-up (“Hello Matthew”).

P2. “Offer a plan” with no plan built is a dead-end screen with one line — route straight into the plan builder instead.

P3. Two different bottom-sheet nudges fired within a minute on Home (Continue setup, then the shop/badge one). Cap nudges to one per session.

P4. Public page slug auto-generates from the email prefix (tradesura.com/p/info). Derive it from trading name once set; “/p/info” looks broken.

P5. Stripe Connect screens must carry TradeSura Ltd branding once re-pointed — see B7 for the account move itself.

P6. Gas Safe no-match flow itself (Try again / Continue anyway + manual verification) is good design — keep it. Open question: the number tested (584120) — confirm whether the register lookup fails on genuine numbers or only rejected an invalid one.

WHAT'S WORKING — keep all of this

Real SMS verification passing at sign-up • consent checkboxes on import and campaign (compliance-grade) • STOP opt-out in the SMS template • Reminders engine defaults (30/14/3 days, reply-to-book) • Payouts transparency box and tax-year CSV export • the copy throughout (“What to say at the door”, “The maths”, Reminders intro) is pilot-ready • new brand correctly applied: app icon (navy tile), splash and header.

NEXT: blockers B1–B7 (B6 first — by Monday evening; B7's Stripe applications submitted early — they carry approval lead times) and the design items (D1 Home, D2 registration form) this week → Matt re-runs the same route on the fixed build at the weekend → demo gate decision. One consolidated list, fixes in any order — shout if anything's unclear.
