TradeSura

BUILD SPEC FOR OLIVER & MOHAMMED

Retention, Home Passport & Growth

Matt Wood · 15 October 2026 · Everything in this pack launches together

Oliver, this pack covers the features we decided on 15 October to keep customers paying, win installers more work and grow TradeSura through Google. **Matt wants all of it live at launch, not phased**, so please scope the full pack and tell us what it means for the early November go-live date.

The screens are wireframes with example data (Dave's Heating, Huddersfield). Please follow the existing app styling: dark screens are the engineer app, light screens are customer-facing pages.

Three rules that run through everything

Cancelling is always easy

A couple of taps from the customer's link. We keep customers with good offers and by showing what they'd lose, never by blocking or delaying. Installers are alerted but can't stop a cancellation.

Everything comes from the engineer

Customer messages carry the engineer's name and logo. TradeSura sits in the background.

No insurance words

No "protection", "cover", "breakdown" or "guarantee" in any customer-facing copy. The existing blocklist applies everywhere.

What's in this pack

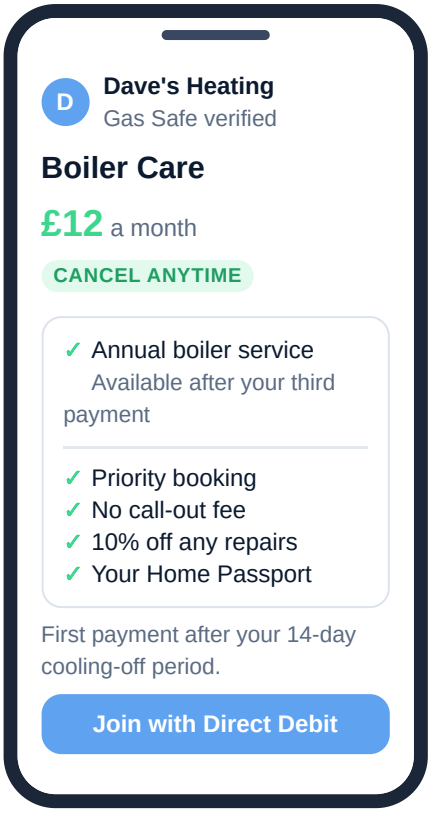

#	Feature	In one line
1	Plan rule changes	No minimum term; annual service unlocks after the 3rd payment; cooling-off; yearly payment; loyalty perk option
2	Cancellation flow	Reason, one tailored offer, "Before you go" screen, installer alert and save
3	Failed payment rescue	Text with one-tap bank update, installer alert, retry
4	Home Passport + boiler stickers	A service history that stays with the house; QR sticker linked at the job
5	Ratings	One-tap rating after every service, "Verified TradeSura customer"
6	Installer profiles + town pages	Public pages built for Google, with Call and Message buttons
7	Website plan widget	Installers sell plans on their own website; links back to TradeSura
8	Onboarding wizard	New "Get found" and "Connect your website" steps
9	Other retention touches	Welcome, win-back, price-rise notice, installer leaving
10	Admin area (Mohammed)	Cancellations, flags, ratings, enquiries, widgets, town pages, stickers

1 Plan rule changes

Plans stay rolling monthly with no minimum term and no exit fee, so "Cancel anytime" stays on the customer screens.

Rule	What the app must do
14-day cooling-off	No first collection and no benefits until 14 days after sign-up. Service start date follows cooling-off and the first cleared payment. *Please confirm the current build does this.*
Annual service after 3rd payment	The annual service can only be booked once the 3rd monthly payment clears. Everything else starts from the service start date.
Cancellation timing	Takes effect at the end of the current paid month. No part-month refunds after cooling-off.
Yearly payment	Optional, e.g. 12 months for the price of 11. Cancelling refunds unused months pro rata.
Loyalty perk option	New approved plan-builder option, e.g. "10% off repairs, rising to 15% after 12 months". Wording from James.

> Payments stay on Stripe Connect **direct charges** on the engineer's connected account with our 20% application fee. Just confirming that's what the build does.

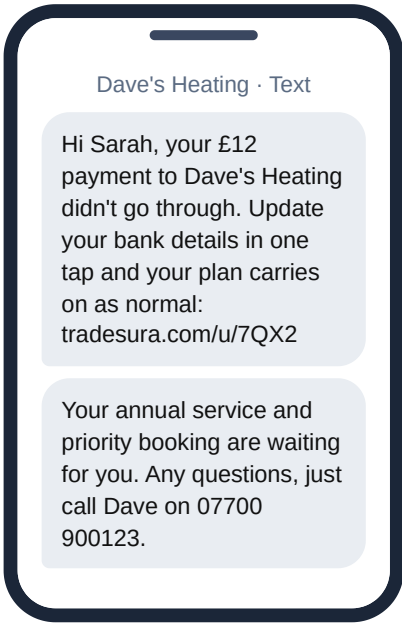

Plan details: the service rule shown up front

3 Failed payment rescue

A failed Direct Debit is how most subscription customers are lost without choosing to leave, so every failure triggers a rescue before anything is cancelled.

1. Stripe reports the failed Bacs payment (webhook).
2. Customer gets a friendly text and email **from their engineer** with a one-tap link to set up a new Direct Debit.
3. Installer gets an alert so they can follow up personally.
4. Retry once new details are added, or on the next agreed date. *Please check Stripe's retry options for Bacs.*
5. Service booking pauses while a payment is outstanding. The plan only ends after a reasonable grace period with reminders.

Track rescued vs lost payments for the admin dashboard.

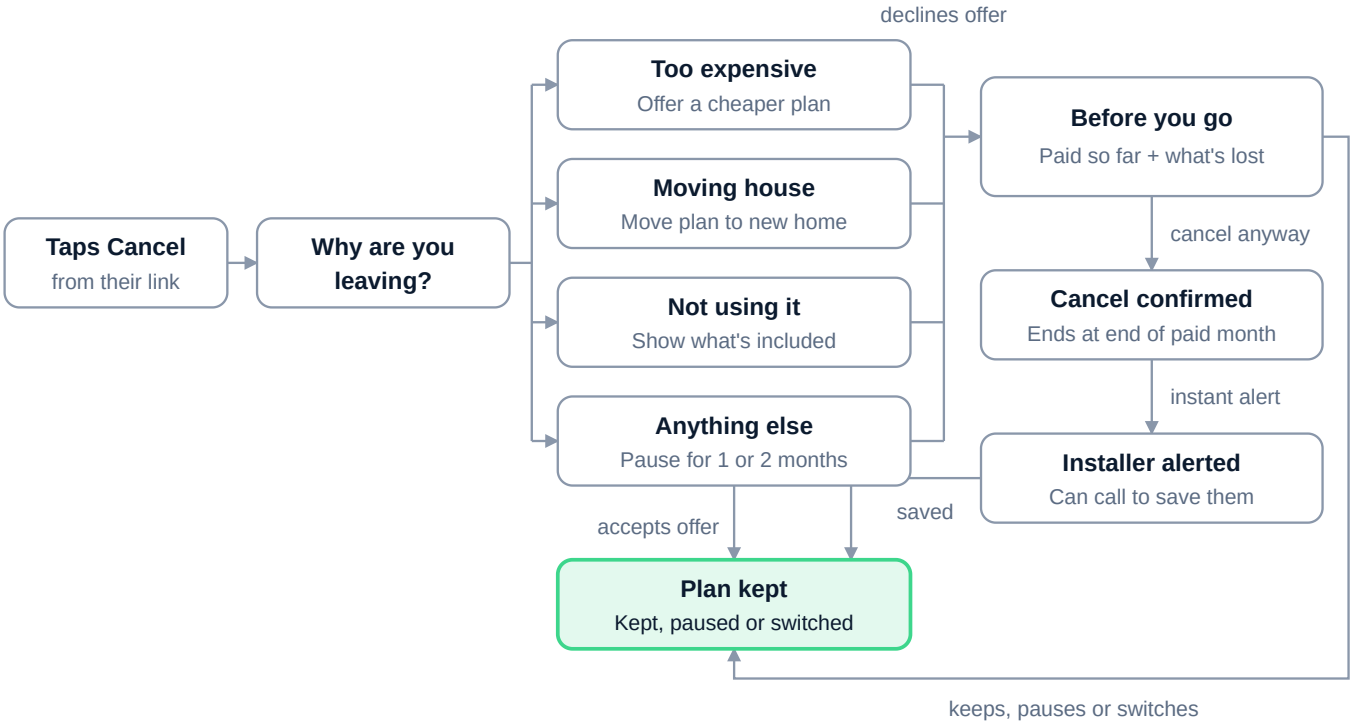

Rescue text, sent as the engineer

2 Cancellation flow

Customers cancel from the manage link in their email or text in three short steps, and the installer gets a chance to save them before the paid month ends.

Every exit gets one offer and a save attempt, and cancelling stays easy

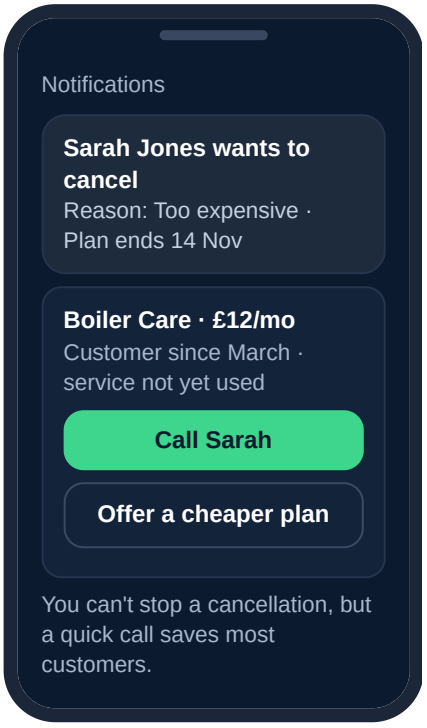

Installer side

- Instant alert (app notification plus text) with the customer's name, reason and the date the plan ends.
- The installer can call to save them; a save is reversed in one tap by the installer or the customer.
- The installer can **never** block or delay a cancellation. Requests made by phone or email are logged by the installer in the app, which triggers the same flow.

Rules

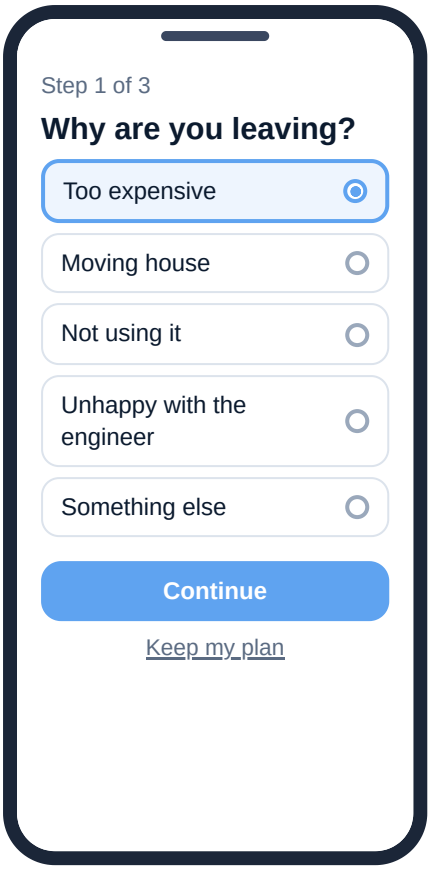

- "Cancel anyway" is always visible on the screen, never hidden behind extra pages.
- Pause = no collections and no benefits, restarts automatically.
- Store every reason and outcome (saved, paused, downgraded, cancelled) for the dashboards.

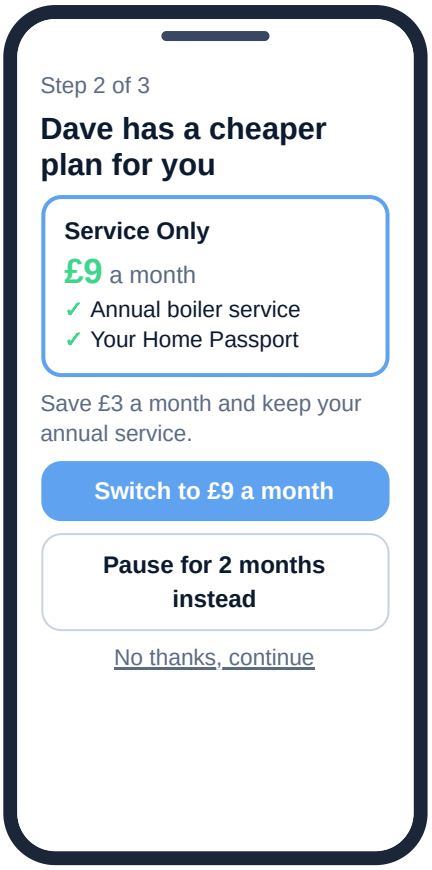

Installer alert with a one-tap call

2 Cancellation flow: customer screens

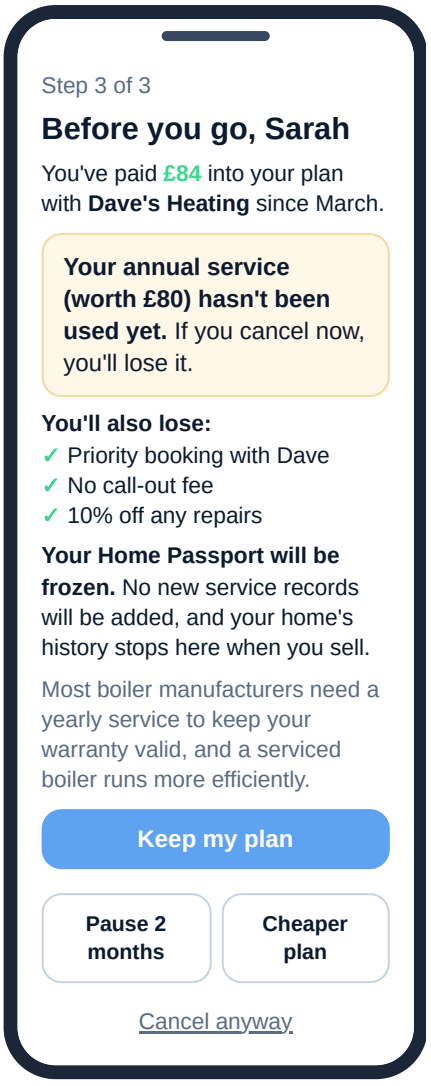

Three screens from the customer's manage link. The "Before you go" copy is agreed with Matt and filled from live data.

1. Reason

2. One tailored offer

3. Before you go

Copy rules. If the service has been used, swap the service line for "You've had your service (worth £80), plus 10% off repairs, all for £84". The warranty line must keep this meaning: *servicing* keeps warranties valid, not the plan itself. After "Cancel anyway", confirm the end date by email with a one-tap "Rejoin" link.

Offers by reason: Too expensive → cheaper plan from the same engineer · Moving house → move the plan if the new address is in the engineer's area, ask the moving date and consent to pass the Home Passport to the next owner · Not using it → what's included and when the service is due · Anything else → pause for 1 or 2 months.

4 Home Passport and boiler stickers

Every property gets one Home Passport: a full service history that belongs to the address, not the person, and stays with the home when it sells. "Home Passport" is the working name, pending a trademark check.

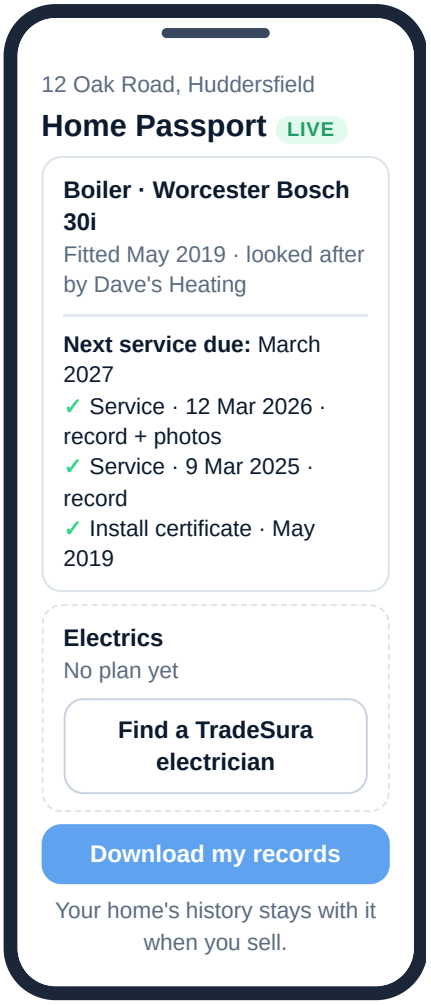

Data model

- **Property** (address, UPRN if available) has one passport.
- The passport holds **appliances** (boiler now; heat pump, solar, electrics later): make, model, install date, photos.
- Each appliance has **records**: services, certificates, engineer notes, next due date.
- A property can have **several plans from different engineers**. Each engineer sees only their own records; the homeowner sees everything.

State	When	What works
LIVE	An active plan	New records added automatically, reminders, booking, full transfer to the next owner
FROZEN	No active plan	Past records viewable and downloadable; nothing new added; history stops at the leaving date. Never deleted.

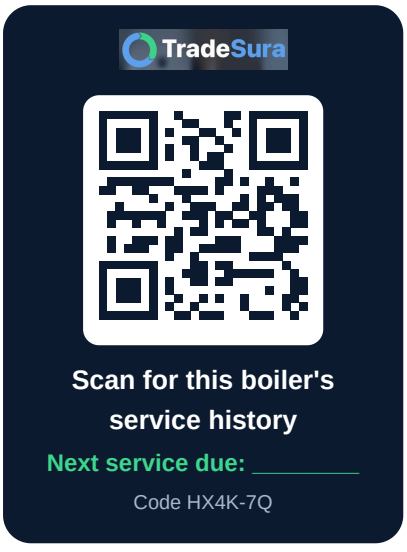

Leads from the passport

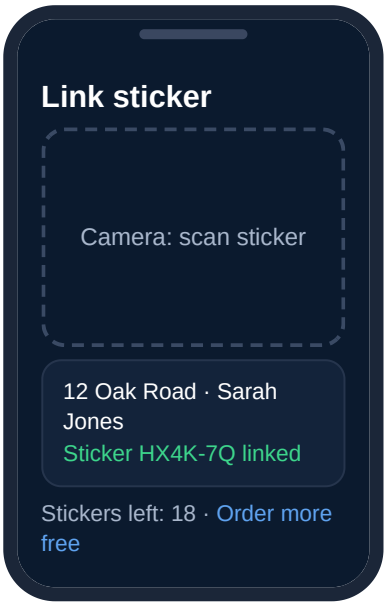

- "No electrics plan yet. Find a TradeSura electrician near you" (once more trades are live).
- Boiler over 12 to 15 years old → replacement or heat pump lead.
- Engineer note such as "pump getting noisy" → repair lead for the engineer.
- Needs the homeowner's consent to be contacted (James is adding it to the privacy notice).

Homeowner view

Boiler stickers and the next owner

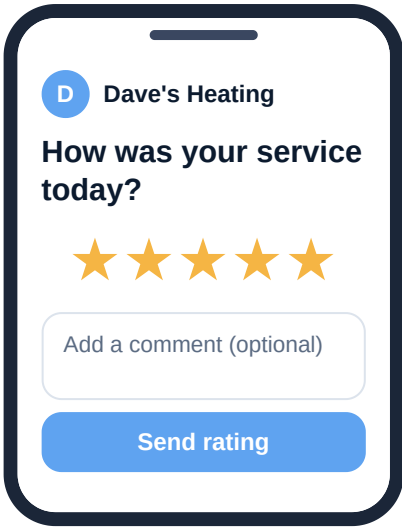

- Pre-printed QR stickers, unique code, no address. 20 to 30 in the member pack.
- At the job the engineer taps **Link sticker** and scans it, tying it to that property's passport.
- Low stock → free top-up offer (or the Membership Shop).
- Heat-proof vinyl, on the case, never over the data plate or vents. Replaces the "next service due" labels engineers already use.
- **Next owner scans:** "This boiler is looked after by Dave's Heating. Last serviced March 2026" + join link.
- **Moving house** in the cancel flow asks the moving date and consent. A week after, the installer gets a "new owner" lead and TradeSura posts a welcome letter automatically.
- Backup: find the passport by postcode on the website.

5 Ratings

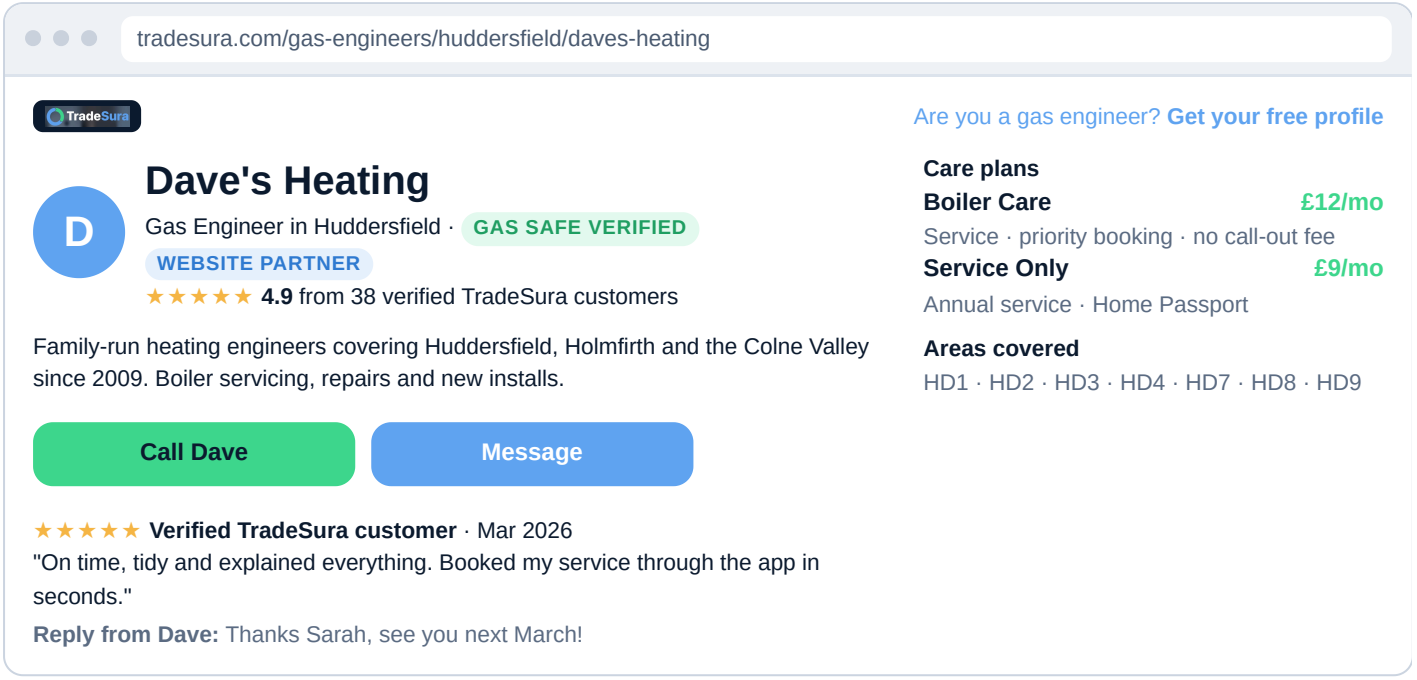

After every service the customer gets a one-tap rating request; every rating shows on the installer's public profile as "Verified TradeSura customer".

- **Who can rate:** plan holders only, after a logged service. One rating per service.
- **What they give:** 1 to 5 stars plus an optional comment.
- **1 or 2 stars:** instant alert to the installer and TradeSura admin.
- **All ratings shown, never filtered.** UK fake-review rules make filtering illegal. Remove only for clear abuse, with a logged reason.
- **Installer reply:** one public reply per rating.
- **New members** show "New to TradeSura" until they have a handful of ratings (Matt to set the number).

6 Installer profile page

Every installer gets a public profile built to rank on Google for their company name and "gas engineer in [town]", with Call and Message buttons that win them work.

6 Profiles and town pages: build notes

Profile page

- URL like **tradesura.com/gas-engineers/huddersfield/daves-heating**.
- Server-rendered so Google can read it, not only a screen inside the app.
- Title: "Dave's Heating: Gas Engineer in Huddersfield | TradeSura" plus a meta description.
- schema.org LocalBusiness + AggregateRating so Google can show stars.
- Gas Safe badge, ratings and replies, plans and prices, areas covered, the installer's own bio and photos (unique text helps them rank).
- **Call** and **Message**: installer chooses the number shown; messages go to the app plus a text or email alert; spam protection on the form.
- Log every call tap and message so the app shows **"TradeSura sent you 12 enquiries this month"**.

Recruitment

- "Are you a gas engineer? Get your free profile" banner on every profile and town page.
- A sign-up that starts from an installer's profile page is credited to that installer under the referral scheme (25% of our fee for 12 months, then 10%).

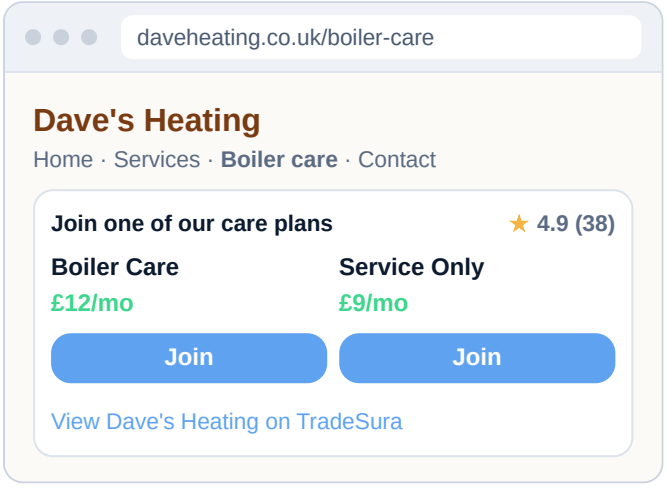

Town pages MATT'S PRIORITY

- **Only publish a town once it has real engineers.** Google penalises lots of thin pages.
- Local content from our own data: typical plan prices, rating counts, areas covered.
- Website partners listed higher.
- Roll out with the regional letter campaign: North West, North East, then the rest.
- XML sitemap, submitted through Google Search Console.

7 Website plan widget

Installers paste a widget into their own website to sell plans there. Every widget links back to TradeSura, which helps the whole site rank, so the app should push it hard.

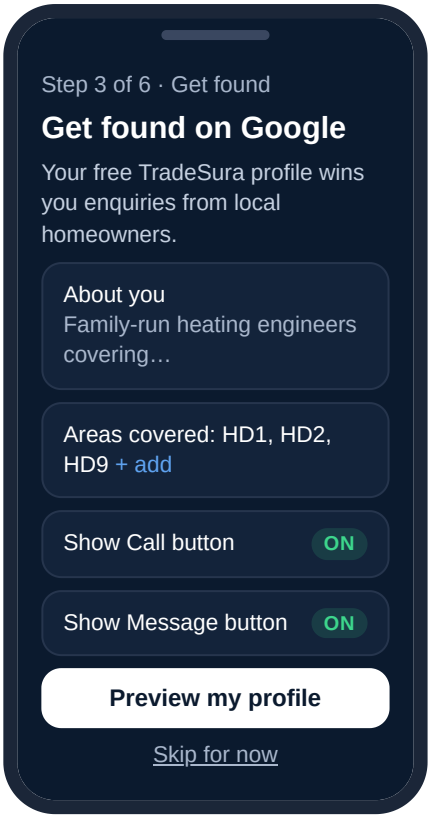

- **Installer's account:** a short embed snippet (script or iframe) plus a one-tap **"Email this to my web designer"** with simple Wix, WordPress and Squarespace instructions. Managed and switchable off from admin.
- **Shows:** plans and prices, rating, Gas Safe badge. "Join" opens the normal TradeSura checkout.
- **Tracking:** sign-ups tagged "website"; installer sees "Your website sold 3 plans this month".
- **Link back:** visible and branded, e.g. "View Dave's Heating on TradeSura". Never keyword-stuffed (Google penalises it).
- **No website:** share link plus QR code.
- **Website partner:** live widget = badge + higher on the town page. Detect "live" (e.g. first load from the installer's domain).
- **Dashboard nudge** "Add TradeSura to your website" until the widget is live.

8 Onboarding wizard changes

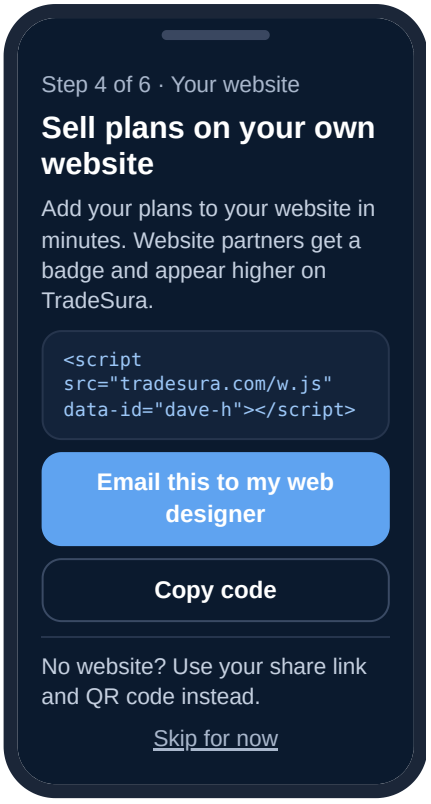

Two quick new steps go into the wizard after the first plan, both skippable so the wizard stays fast. Skipped steps come back as dashboard cards until done.

1. Stripe verification (as now)
2. First plan (as now)
3. **Get found (new):** short bio, a couple of photos, areas covered; switch on Call and Message and choose the number shown; preview of their profile page.
4. **Connect your website (new):** "Email this to my web designer" with the widget code, or share link plus QR if no website.
5. Import your customer book (as now)
6. Member pack (as now)

Please tell us if placing steps 3 and 4 here clashes with the existing steps.

Get found

Connect your website

9 Other retention touches

These cover the other moments customers tend to leave. Matt has decided against regular "here's what you get" marketing reminders; service-due reminders stay as they are.

Touch	When	What happens
Welcome	First 90 days	Welcome message from their engineer, then a prompt to set up their Home Passport (boiler photo and details).
Win-back	30 days after cancelling, and again before winter	One-tap rejoin offer from their engineer, e.g. "Rejoin and get your first month free" (the engineer's choice of offer).
Price rise notice	30 days before any increase	Required notice (old and new price, reason, date, free cancel link) also shows what they've had for their money. Encourage small rises.
Installer leaves	When an installer exits	Offer the customer a nearby TradeSura engineer; the plan only moves with the customer's agreement.

10 Admin area additions (for Mohammed)

The admin area needs to show which installers keep customers and which lose them, so we can step in early.

admin.tradesura.com/installers/retention

Cancel requests (30 days)	Saved, paused or switched	Failed payments rescued	Profile enquiries
41	**17**	**23 of 29**	**312**

Installer	Live plans	Cancel rate	Top reason	Rating	Low ratings	Enquiries	Widget	Stickers
Dave's Heating	64	2.1%	Moving house	4.9 (38)	0	27	LIVE	18
Colne Valley Gas	41	3.0%	Too expensive	4.8 (21)	1	19	LIVE	9
HD Boiler Services	22	9.4% ⚑	Unhappy with engineer	4.1 (9)	3	6	—	24
Pennine Heat	15	2.6%	Not using it	New	0	4	—	2 ⚑

⚑ Flagged: cancel rate well above average (threshold set in admin) · sticker stock low

Example data.

- **Cancellations:** reasons, saves, pauses, downgrades and cancels, per installer and overall.
- **High-cancel flag:** installers well above average are flagged (threshold set in admin).
- **Ratings:** average and count per installer; every 1 or 2 star rating listed with reply status.
- **Quality score:** rating plus cancellation rate in one view per installer.
- **Failed payments:** rescued vs lost. **Enquiries:** calls and messages per installer.
- **Widgets:** who has one live, and "website" sign-ups. **Town pages:** publish or hold each one. **Stickers:** stock and top-ups.

The installer's own dashboard shows their version: cancellation reasons, ratings, enquiries and website sales.

Questions for Oliver

- ☐ How long will the full pack take, and what does it mean for the early November go-live?
- ☐ Rough time per section, so we can set the launch date.
- ☐ Does the build hold the first collection and all benefits until the 14-day cooling-off has passed?
- ☐ What retry options does Stripe allow for failed Bacs payments?
- ☐ Profile and town pages: in the existing web app (server-rendered), or a separate site?
- ☐ Website widget: script or iframe, and how do we detect it's live?
- ☐ Sticker linking: scan in the app, or is typing the code simpler?
- ☐ Anything here that clashes with what's already built?
