BUILD NOTES · FOR OLIVER

TradeSura — Create Your Account (steps 1–3)

Sign-up flow: You · Gas Safe · Business

Issued 30 September 2026 · Matt Wood

Good progress: all three steps are in place, the ring logo is correct throughout, placeholders are now grey hints (not pre-filled text), and **validation works on step 3** (company number and postcode errors show clearly). The duplicate-email check on step 1 is also right. Below is everything needed to finish the flow, step by step, with a target design for each.

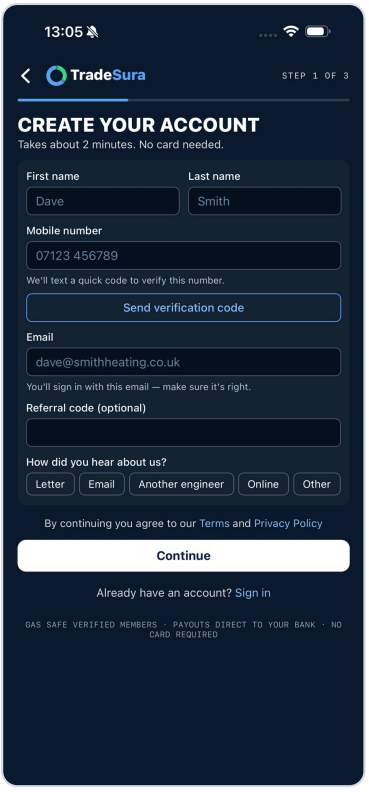

DO THESE FIRST

1. **Plan builder and money loop**: still the overall top priority.
2. **Mobile verification is not real yet.** No text is sent, and **any code is accepted** as "verified". Connect the SMS service and only verify when the code matches (details in step 1, item 15).
3. **The ID photo can't be added.** Tapping the camera or "choose a photo" does nothing, so no engineer can get past step 2 (step 2, item 1).
4. **After "Create my account", the engineer must land in the setup wizard** (build your first plan), not the dashboard. On Tuesday it skipped straight to the dashboard. Please confirm this is fixed (step 3, item 8).

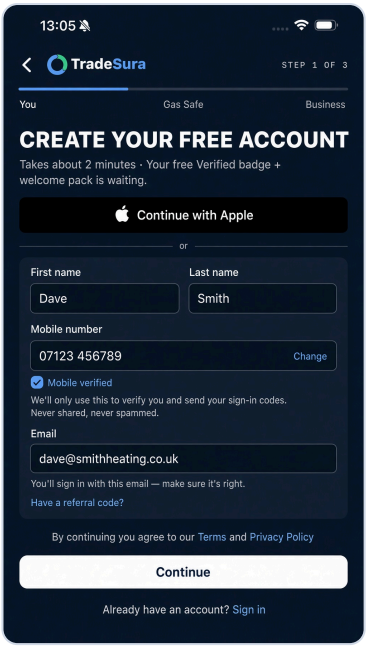

Rules that apply to all three steps:

- Remove the footer line "GAS SAFE VERIFIED MEMBERS · PAYOUTS DIRECT TO YOUR BANK · NO CARD REQUIRED" from all three steps.
- Add three small labels under the progress bar: **You · Gas Safe · Business**, with the current step in white and the others grey.
- Ticks for "verified" or "selected" are a **plain blue tick icon**, not a checkbox (so nobody thinks they need to tick it). Blue #5FA3F0; green is for money only.
- Every field shows its own red error underneath when something is missing or wrong, and the main button always explains itself: tapping it highlights what's missing rather than doing nothing.

Step 1 — Create your free account

Current build
Layout right; needs the changes below.

Target design
Make the "Mobile verified" tick a plain icon (not a checkbox); give the Apple button a thin light-grey border.

DESIGN

1. **Fields taller:** about 56pt high, with the text a size up. Engineers need room for their thumbs.
2. **Heading:** "CREATE YOUR FREE ACCOUNT", on one line. On small iPhones, shrink the heading slightly rather than wrap.
3. **Subtitle:** *"Takes about 2 minutes · Your free Verified badge + welcome pack is waiting."*
4. **Chips:** the tapped chip fills blue; only one can be selected.

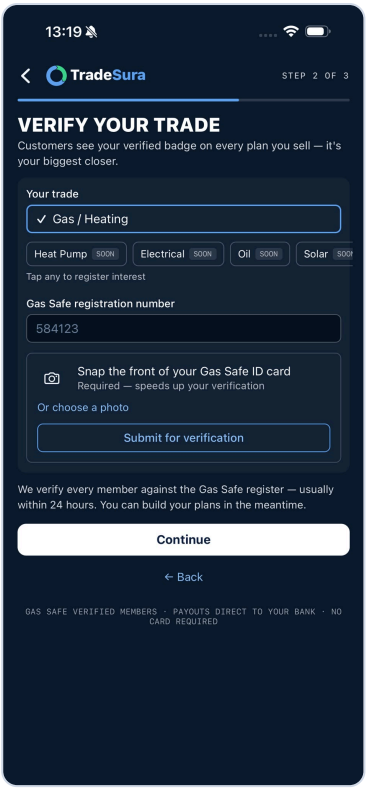

FASTER SIGN-UP

5. **"Continue with Apple"** at the top, pre-filling first name, last name and email. Black button with a thin light-grey border so it stands out on navy. "or" divider, then the email form. *Android version (later): "Continue with Google" instead.*
6. **Mobile verification without a separate button:** remove "Send verification code". When they tap Continue, the code is sent and a code box slides in under the mobile field, with iPhone code autofill.
7. **Once verified:** lock the number, show a small blue "Change" link inside the field, and a blue tick with "Mobile verified" underneath.
8. **Privacy line under the mobile field:** *"We'll only use this to verify you and send your sign-in codes. Never shared, never spammed."*
9. **Referral code hidden** behind a small blue link, "Have a referral code?". If they arrive from an invite link, the code fills in and the box opens automatically.
10. **"How did you hear about us?" only when the source is unknown.** If they came from a letter QR, invite link or email link, skip the question and record the source automatically.
11. **Keyboards and autofill:** number pad for the mobile, email keyboard for the email, names auto-capitalised, and iPhone autofill on all fields.
12. **Save progress:** if they leave the app mid-way, everything typed is still there when they return.

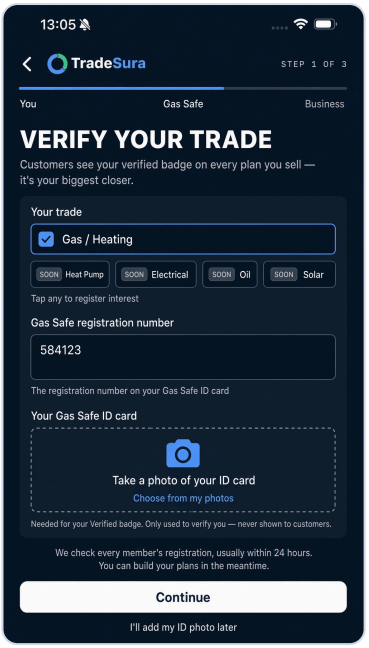

CHECKS

13. **Duplicate email:** make the message one line: *"This email already has an account. Sign in instead"*, with only "Sign in instead" as the link.
14. **Continue is blocked until the mobile is verified**: "Verify your mobile to continue".
15. **SMS verification must be real (TOP PRIORITY). Send a real 6-digit code by text. Only mark the mobile verified when the code matches. Codes expire after 10 minutes and work once; after 5 wrong tries, block for 15 minutes. Until SMS is connected, the screen must not say "we texted" when nothing was sent.**
16. **Terms and Privacy links** must open a page. A placeholder is fine until the legal documents are ready.

Step 2 — Verify your trade

Current build
Validation works; photo can't be added.

Target design
Header should read STEP 2 OF 3; Gas Safe field single height; trade tick a plain icon.

TOP PRIORITY

1. **The camera and "choose a photo" do nothing, so no engineer can get past this step. Add the camera and photo-library permission messages to the app settings and wire up both options.**

THE ID PHOTO, DONE PROPERLY

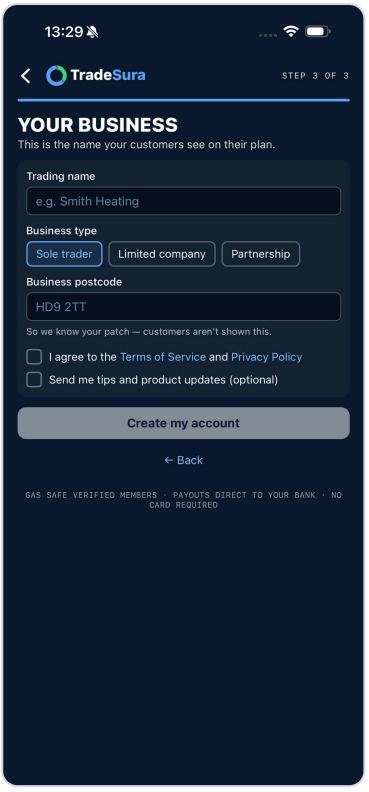

2. The **whole photo panel is one big tap target** (dashed outline, large camera icon): "Take a photo of your ID card".
3. **Permission ask with a reason:** *"TradeSura would like to use your camera — to photograph your Gas Safe ID card for verification."* If refused, show an **"Allow camera in Settings"** button that opens the phone's settings. Never a dead end.
4. **Camera with a card-shaped guide** (as banking apps use for ID): *"Line up the front of your card inside the frame."*
5. **Preview:** "Retake" and "Use this photo", plus *"Check your name, photo and number are clear."*
6. **"Choose from my photos"** as the second option under the main button.
7. **Once added:** thumbnail, blue tick, "ID card added", and a small "Change" link.
8. **Upload:** progress indicator; if the signal drops, *"Upload failed — tap to try again"*, without losing the photo.
9. **Under the panel:** *"Needed for your Verified badge. Only used to verify you — never shown to customers."*
10. **"I'll add my ID photo later"**: small grey link under Continue. The account is still created, the badge stays pending, and they **cannot offer a plan to a customer until verified** (existing offer gate). Follow-ups: the dashboard strip "Add your Gas Safe ID to go live", a reminder text the next morning, and the welcome pack only posts when the badge goes live.

THE REST OF THE PAGE

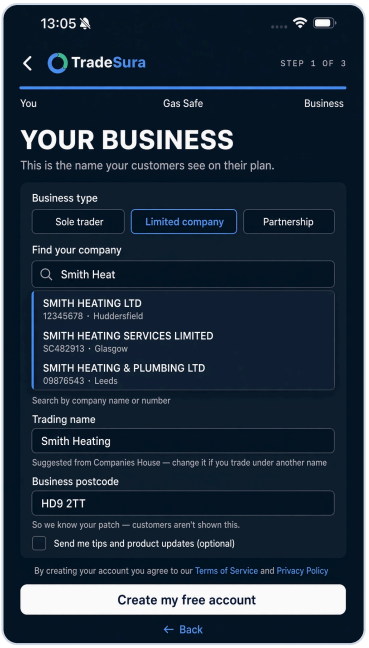

11. **Remove the "Submit for verification" button.** Continue submits everything. Two buttons confuse people.

12. **Line under the card:** *"We check every member's registration, usually within 24 hours. You can build your plans in the meantime."* (Replaces "We verify every member against the Gas Safe register": we avoid wording that implies a link with Gas Safe.)
13. **Trade chips wrap onto a second line** so none are cut off ("Solar SOON" currently runs off the edge). Keep "Tap any to register interest".
14. **Gas Safe registration number:** number keypad, digits only, **1 to 7 digits accepted**. Older registrations can be as short as 2 digits, so there's **no fixed-length rule**. Hint: *"The registration number on your Gas Safe ID card"*. Error only for letters or more than 7 digits. The exact number is confirmed in the manual check against the ID photo.

Step 3 — Your business

Current build
Validation now works; good.

Target design
Header should read STEP 3 OF 3; only the tapped result gets the blue edge.

1. **Companies House lookup (limited companies):** when "Limited company" is chosen, show a "Find your company" search field. As the engineer types a name or number, matching companies appear (name · number · town). Tapping one fills the company number and **suggests the trading name** (editable, helper text: *"Suggested from Companies House — change it if you trade under another name"*). Lookups go through the **TradeSura server**; the API key never goes in the app. Save the company status, and **flag** (don't block) dissolved or liquidated companies in the admin verification queue. **Matt will provide the Companies House API key.** Sole traders and partnerships type their trading name as now.
2. **Company number check** (when typed manually): 8 characters: 8 digits, or 2 letters + 6 digits (SC, NI, OC, SO, NC). If they type 6 or 7 digits, **add the leading zeros automatically** (1234567 → 01234567). Reject anything else with the current message.
3. **Postcode:** keep the current check (it works). Auto-capitalise.
4. **Replace the Terms checkbox with a line of text** above the button: *"By creating your account you agree to our Terms of Service and Privacy Policy."* That's one fewer tap, and the button is never greyed out without a reason.
5. **Marketing checkbox:** keep it, **unticked by default** (the legally correct opt-in).
6. **Button text:** "Create my **free** account". Keep it always active; if something's missing, highlight the field in red.
7. **Progress bar** fully blue, with "Business" highlighted in the labels.
8. **After "Create my free account", go straight into the setup wizard (build your first plan). Not the dashboard. On Tuesday it skipped the wizard; please confirm this now works.**

> **Update to the sign-in brief sent earlier today:** showing "This email already has an account" on sign-up is fine and helpful, so keep it. Relax the sign-in rule "don't reveal whether an email is registered" to match. Everything else in that brief stands, including the SMS section.
